

Applicant: Christer A. Sjogren
Application No.: 10/644,701

Amendments to Drawings:

Kindly replace the drawing sheets respectively containing Figures 1 and 2 with the replacement sheets accompanying this amendment.

REMARKS

The present application contains claims 1-42 which have been indicated as being allowed. Responsive to telephone interviews conducted with Examiner Bui-Pho on August 29, 30, and 31 and October 5, 2005, applicant was advised that designated numerals 89, 94 and 95 appearing in the drawings were not found in the specification. Applicant carefully reviewed the above-mentioned application and discussed amendments to the specification to incorporate references to designating numerals 94 and 95. Regarding designating numeral 89, this has been changed in both the specification and figures to identify the nip N.

In addition to the above, it was noted that designating numeral 54 was utilized to identify two different components. As a result, Figure 2 and the specification has been amended to refer to the laser sensor by the designating numeral 84'. Also the laser beam and reflected laser beam have respectively been identified by designating numerals 84a' and 84b'. The signal from laser sensor to the microprocessor has now been designated as 84c'.

In addition to the above, amendments have been made to Figures 1 and 2 to represent the elements 88 and 88' as intercept arms as opposed to newspapers which are identified by the designating numeral 25 in Figures 1 and 2. No new matter has been added.

After careful review of the Examiner's Amendment, Applicant discussed three (3) additional corrections with the Examiner who agreed with the changes and requested the Applicant to present those three (3) changes in this Rule 312 Amendment.

All of the above changes were discussed in detail with Examiner Bui-Pho who indicated they would be approved.

Applicant: Christer A. Sjogren
Application No.: 10/644,701

In view of the fact that all of the claims have been allowed and further in view of the fact that the amendments to the specification and Figures 1 and 2 comply with the Examiner's requirements and are consented to by the examiner, it is submitted that this amendment, and specifically the drawings, should be approved and that the present application is now fully in condition for allowance.

Favorable action is awaited.

If the Examiner believes that any additional matters need to be addressed, or that a telephone interview will help to materially advance the prosecution of this application, the Examiner is invited to contact the undersigned by telephone at the Examiner's convenience.

Respectfully submitted,

Christer A. Sjogren
